

BIOFEEDBACK STUDY 2

UNIVERSITY OF VECHTA, PROFESSOR I. PAHMEIER

PILOT STUDY

EXCIO BIO-FEEDBACK-TRAINER

PROTOTYPE

EXCERPT: In a pilot study at the Institute for Sports Science at the University of Vechta, 59 participants (44 women and 15 men) were interviewed about training with the Bio-Feedback-Trainer. The subjects used the Bio-Feedback-Trainer for three months; they expressed satisfaction with the device and acceptance of the method. They rated training of the pelvic floor musculature as clearly noticeable, without experiencing an excessive degree of exertion. The study revealed that the subjects experienced a reduction in involuntary urine loss, despite the short intervention period of 3 months. According to the study, the drop in the number of incontinence pads required after the intervention further substantiates this finding.
